

Speed Queen Efficiency and a Quantum™ Leap Forward

Speed Queen Strength & Efficiency

Reliable Made-in-America performance is only part of the reason Speed Queen has become the choice of property owners, developers and colleges. At a time when the environment influences each decision we make, Speed Queen washers and dryers deliver efficiency

that makes you feel good along with real savings to remind you that you are doing good for your bottom line.

Speed Queen's new Quantum™ EcoWatersaver™ control combined with our front load Horizon® washer reduces water consumption to an ultra-low 12.8 gallons. This superior efficiency has earned the Horizon® EcoWatersaver™ an ENERGY STAR® rating and also makes it CEE Tier 3 qualified. Likewise, Speed Queen top load washers exceed U.S. Department of Energy standards for water and energy use, while our dryers yield excellent efficient drying power to keep operating costs low.

Quantum™: The Future of Laundry Room Management

No longer is the laundry viewed as utility. When done correctly with the right equipment and features, the laundry room can become an amenity that helps attract and retain residents. And choosing Quantum-controlled Speed Queen equipment helps deliver those results.

For residents, Quantum gives them the ultimate in flexibility to tailor wash and dry cycles to meet their specific needs. This control is definitely designed with the user in mind, with a digital display counting down vend as coins are added as well as keeping them updated on wash and dry progress with a cycle time countdown.

Property owners and laundry service providers, as well, benefit from a host of features within the control and management software that help simplify operation and create additional profit opportunities. Features include:

QUANTUM™ CONTROL

The Quantum™ control (an electronic microboard with digital displays) on a full model line of top load and front load washers, matching single load, stacked dryers and stacked washer/dryers.

COIN DROP VALIDATOR

For exceptional security our coin drop magnetically verifies content, coin size and weight, which ensures accurate collection information. Models also can be prepped for a card reader. Using the card reader system of your choice creates the convenience of a cashless operation for residents.

PDA

Two-way communication for programming and downloading collection information is easily accomplished in seconds with a PDA.

SPECIAL PROGRAMMING

Our special programming allows you to customize cycles, establish vend prices, determine rinse options and program special features.

- **Special time-of-day pricing** to compete against other laundry services offered to residents outside the building.
- **Premium wash cycles** for bonus vending to increase revenue.
- **Automatic Shutdown Mode** allows you to control laundry room hours of operation by programming start and stop times.
- **Power Saver Mode** reduces power draw when laundry room is closed.
- **Top-off dryer time** can be set up to allow purchase of additional time after the resident has bought the initial dryer cycle.
- **Multi Level Vend Promotion** helps property management realize savings on hot water consumption by offering higher pricing for hot and warm washes.
